Book information

Authors: Louie Al-Faraje

Title: Clinical Anatomy for Oral Implantology

Short text:

Anatomical knowledge is vital not only for the safe and successful execution of surgical procedures, but also as the basis for accurate diagnosis and treatment planning. This in-depth anatomical text is designed with the practicing implantologist in mind, and it has been revitalized to have the utmost relevance to the clinical reality of oral implantology today. Impeccable full-page illustrations demonstrate a detailed view of each anatomical area, and clinical photography, radiographs, CBCT scans, and cadaver specimens provide a complete picture of what the clinician can expect to encounter. As with the previous edition, the aim of this book has been to present the necessary anatomical material in a readable and interesting form, and every effort has been made to sequence the information in a logical manner. This book is a must-have for any implant surgeon.

Contents

Chapter 01. Arteries, Veins, and Innervation of the Maxilla and the Mandible
Chapter 02. Muscles of Facial Expression and Mastication
