## **Book information**

Authors: Ralf J. Radlanski / Karl H. Wesker

Title: The Face

Subtitle: Pictorial Atlas of Clinical Anatomy

**Short text:** 

### Expertise for the practice:

For the first time, the highly complex topographic-anatomical relationships of facial anatomy are depicted layer by layer using extremely detailed anatomical illustrations with a three-dimensional aspect. Important landmarks, anatomical details, and clinically relevant constellations of hard and soft tissues, as well as of nerves and blood vessels, have been detailed. Another important feature is that the point of view is maintained throughout while moving through the different layers of preparation. While the accompanying text and figure captions highlight specific issues, the images remain in the foreground. The elaborate illustrations are based mainly on live anatomy and corresponding images obtained from magnetic resonance imaging, with some support from anatomical preparations.

### Highlights:

- Outstanding graphics: the highly elaborate graphical illustrations present the topographic-anatomical relationships in facial anatomy.
- Representation of the aging phenomenon: a series of images emphasize agerelated structural changes.
- Practical aid: presentation of clinically relevant details allows orientation for all
  procedures and surgical interventions in the facial region.
